

Bootstrap

Prof. Manan Thakkar

Bootstrap Button

- Bootstrap provides us with different classes that can be used with **<button>** tag to apply custom button styles.
- Bootstrap also provides classes that can be used for changing the state and size of buttons.

Bootstrap Button

- There are seven styles to add a button in Bootstrap. Use the following classes to achieve the different button styles:

1. `.btn-default`

2. `.btn-primary`

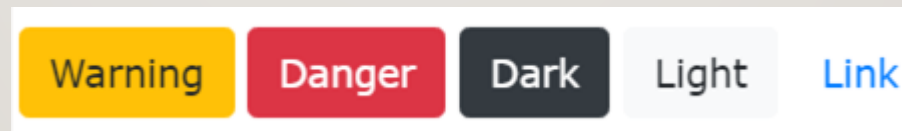

3. `.btn-success`

4. `.btn-info`

5. `.btn-warning`

6. `.btn-danger`

7. `.btn-link`

Bootstrap Button

- There are 3 types of new buttons added in Bootstrap 4 along with 7 buttons given in Bootstrap 3.
- These 3 buttons are:
 1. Secondary
 2. Dark
 3. Light

Bootstrap Button Size

- In Bootstrap, you can choose a button according to your requirement. It provides four button sizes.
- The following classes define the different sizes:

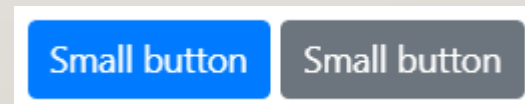

1. `.btn-lg`

2. `.btn-md`

3. `.btn-sm`

4. `.btn-xs`

Bootstrap Enable/Disable Button

- we can set a button disable or unclickable state.
- The **.active class** is used to make a button appear pressed, and the **class .disabled** makes a button unclickable
